Subject: current settlemenet is a joke!

As long as Microsoft doesn't publishes all protocols they use to interact with other products, they should be broken up. What I think the DOJ should do is allow Microsoft to use only internationally accepted protocols. The law should not allow microsoft to accept and extend protocols.

Also Microsoft should publish the Word format so other companies can write a competing application. the same goes for Excell. Or force Microsoft to write only in xml or an accepted format like that.
